

Colorado Fetal Care Center

Children's Hospital Colorado

2023 OUTCOMES

Fetal Cardiology

The Colorado Fetal Care Center delivers some of the safest, highest-quality and most innovative fetal care available. From perinatal medicine to neonatal and pediatric subspecialty care, we offer a full array of services for parents, babies and families, including nearly any fetal treatment available. We work with maternal fetal medicine specialists, midwives, obstetricians and family physicians from across the country and consider them an integral part of our team.

Housed within the Colorado Fetal Care Center, our fetal cardiology program offers comprehensive care for congenital defects and other abnormalities affecting the cardiovascular system, both in utero and after birth. Via 24/7 telemedicine and our Fetal Echo Preceptorship program, we work with regional centers to deliver cutting-edge care to families from many miles away, allowing patients to stay close to home throughout their pregnancy.

After birth, newborns get immediate access to the most advanced care for congenital heart defects from our Heart Institute, which is consistently ranked by U.S. News & World Report and is one of only eight stand-alone pediatric heart research centers in the country. The Heart Institute is located in the same building as the Colorado Fetal Care Center, making it incredibly easy and convenient for new parents and their babies to quickly access the care they need. Patients also benefit from our cardiac intensive care unit (CICU), which consistently maintains some of the best outcomes in the nation. Our CICU works closely with surgery and anesthesiology teams, among others, to nurse patients back to health and is the only of its kind in the region.

We exceed the national averages in:

- Neonatal survival in multiple STAT categories
- Surgical outcomes across all age groups and operation types
- Pediatric heart transplant one-year and three-year survival rate
- Extremely low levels of radiation exposure in our cardiac catheterization laboratory

Stat 5 newborn survival (January 2019 – December 2022)

9.9%

Higher survival at Children's Colorado than the national average

1,800+
Fetal echocardiograms in 2023

90.1%
CICU and CPCU combined patient satisfaction rate in 2022

114
CHD deliveries in 2023

Cardiac surgery: Neonatal and infant survival (July 2018 – June 2022)

Age	Total patients	Observed survival rate Children's Colorado	Expected survival rate Children's Colorado	National survival (STS)
Newborns	344	95.06%	93.79%	92.64%
Newborns + Infants	944	96.72%	96.43%	95.85%

Source: Society of Thoracic Surgeons data from July 2018 through June 2022. Society of Thoracic Surgery (STS) is the largest congenital heart surgery database and includes data from 112 North American hospitals. Data taken from the 2022 risk-adjusted report.

Research and trials

Children's Hospital Colorado is one of the largest university-affiliated healthcare research complexes in the world, and as a result, we are continually working to develop new therapies across the perinatal spectrum. This includes fetal cardiology, where studies are underway to explore new treatment options, understand outcomes better and more.

For any questions about ongoing research and trials, please don't hesitate to contact us.
